

User Acceptance Testing Guide

Role: Study Coordinator — demo persona “Ravi Kumar”

Document date: 12 September 2026

Application under test: **<https://ayusphere-three.vercel.app>**

Environment: Production demo (seeded demo data — no real patient data)

YOUR TEST CREDENTIALS

URL

Email

Password

This guide walks you, step by step, through every feature available to the **Study Coordinator** role. No technical knowledge is required — follow the numbered steps, compare what you see with the screenshot, tick the checklist, and record Pass / Fail in the sign-off table at the end. All screenshots were captured from the live application.

AYUSH — Traditional Wisdom, Modern Evidence

About this role

What the Coordinator can do: day-to-day trial operations — manage trials, screen / consent / enrol participants, run the visit schedule, enter CRF data (typed or via AI doctor-note scanning), capture adverse events, acknowledge alerts, upload documents, use the AI assistant and message the team.

What the Coordinator cannot do: *approve* CRF entries or AI extractions (only the PI or Administrator approve — your entries go into their approval queue), approve Ethics reviews, run PV adverse-event review, run exports, manage sites or users, or view the audit trail.

What you will test

1. Logging in
2. Navigation overview & dashboard
3. Clinical Trials
4. Participants — screening, consent, enrolment
5. Visit Schedule
6. Visit detail — entering CRF data
7. Data Entry (eCRF) — Doctor Note Intelligence (AI)
8. Adverse Events — capture
9. Messages (internal communication)
10. Alerts — acknowledge
11. Documents
12. Signing out

Before you start

General notes for testers:

- Use a modern desktop browser (Chrome or Edge recommended) at a comfortable window size.
- This is a shared demo environment — other testers may add data while you test; counts in your screenshots may differ slightly from the figures in this guide. That is normal and not a defect.
- Every action you take is recorded in the immutable audit trail — this is by design (ALCOA+ compliance).
- AI features (Doctor Note extraction and the AI Copilot) are powered by a configurable AI provider — currently Google Gemini (gemini-2.5-flash); an administrator can switch to Anthropic Claude under Settings. AI output can vary between runs; judge behaviour, not exact wording.
- If a page fails to load, refresh once before recording a failure (cold serverless starts can take a few seconds).

1 Logging in

What this is for. AyuSphere is protected by role-based access control (RBAC). Signing in with your role account determines exactly which pages and actions you can see — nothing more, nothing less.

STEPS

1. Open a browser and go to `https://ayusphere-three.vercel.app`. You are redirected to the login page.
2. In the **Email** field type `coordinator@aiaa.demo`.
3. In the **Password** field type `Demo@1234`.
4. Click the **Sign in** button.

Expected result. You are taken to the **Dashboard**. The top-right corner shows “Ravi Kumar — Study Coordinator”.

ACCEPTANCE CHECKLIST

- ☐ The login page loads with AyuSphere branding.
- ☐ A wrong password shows an error and does NOT log you in (try once, then use the correct one).
- ☐ The correct credentials open the dashboard.
- ☐ Your name and role are shown in the top-right corner.

Fig. 1. The AyuSphere login page. Captured from the live system on 12 September 2026.

2 Navigation overview & dashboard

What this is for. Your operational overview: trial KPIs, participant distribution, site recruitment, upcoming and overdue visits, recent activity and AI insights.

STEPS

1. After logging in, check the left sidebar. As Coordinator you should see: **Dashboard, Messages, Clinical Trials, Participants, Visit Schedule, Data Entry (eCRF), Extractions, Adverse Events, Alerts, AI Assistant, Documents.**
2. Confirm you do NOT see: Site Management, Monitoring, Ethics Review, Reports & Exports, Audit Trail or Settings.
3. Review the KPI tiles, charts, Upcoming Visits (overdue flagged red) and AI Insights cards.

Expected result. The dashboard renders with live data and the sidebar shows exactly the Coordinator's menu — notably without exports, audit or settings.

ACCEPTANCE CHECKLIST

- ☐ The sidebar shows exactly the menu items listed above — no more, no fewer.
- ☐ The welcome header greets you by name.
- ☐ KPI tiles show numbers (not errors or blank tiles).
- ☐ The current date is displayed correctly.

Fig. 2. Coordinator dashboard. Captured from the live system on 12 September 2026.

3 Clinical Trials

What this is for. The trial portfolio with lifecycle status chips and enrolment progress. Coordinators help manage trial records and lifecycle steps (the Ethics gate stays with the IEC; approvals stay with the PI).

STEPS

1. Click **Clinical Trials** in the sidebar.
2. Scan the cards: CTRI ID, status chip (draft / iec review / iec approved / ctri registered / active), title, intervention, phase and enrolment bar.
3. Open one trial to view its detail: lifecycle card, enrolment / dropout / visit-compliance KPIs, site performance and milestones.

Expected result. All seeded trials are listed with correct status chips; the detail page opens with KPIs and milestone history.

ACCEPTANCE CHECKLIST

- ☐ Trial cards show CTRI ID, status, title, phase and enrolment.
- ☐ A trial detail page opens from the list.
- ☐ KPIs and milestones are populated on the detail page.

4 Participants — screening, consent, enrolment

What this is for. The de-identified participant register is the Coordinator's core workspace: add participants to active trials (auto-generated subject codes), track screening / consent / enrolment, and withdraw with a documented reason when needed.

STEPS

1. Click **Participants** in the sidebar.
2. In **Add participant**, choose an active trial · site and click **Add (code auto-generated)** if your test plan includes enrolment — a new subject code appears in screening.
3. Filter the table by one trial and click **Apply**.
4. Verify a row's chips: screening *passed*, consent *given*, status *enrolled* with arm (intervention / control).
5. Note the **Withdraw** action requires a reason — do not use it unless instructed.

Expected result. Participants are listed by de-identified code only; the add flow generates the next code automatically; chips reflect each participant's true stage.

ACCEPTANCE CHECKLIST

- ☐ No personal data is displayed anywhere.
- ☐ The trial filter works.
- ☐ Screening / consent / status chips display for every row.
- ☐ Add participant offers only active trials.

5 Visit Schedule

What this is for. Your daily worklist: protocol visit windows computed from enrolment, grouped Overdue / Due / Upcoming, so you always know which participant to see next.

STEPS

1. Click **Visit Schedule** in the sidebar.
2. Review the **OVERDUE**, **DUE** and **UPCOMING** groups with their counts.
3. Check any row: subject code, visit name, status chip, protocol window and scheduled date.
4. Click a visit row to open its e-CRF (next section).

Expected result. Visits are grouped correctly by window against today's date and rows open the visit detail page.

ACCEPTANCE CHECKLIST

- ☐ All three groups render with counts.
- ☐ Windows and scheduled dates are shown per visit.
- ☐ Clicking a row opens the visit detail.

Page 11 of 22

6 Visit detail — entering CRF data

What this is for. Enter visit data into the CDISC-mapped e-CRF (BP, pulse, dose, notes). As Coordinator you can save drafts and submit entries for approval — the PI (or Admin) then approves them. Completing a visit stamps it and clears its overdue alerts.

STEPS

1. From **Visit Schedule**, open any due or overdue visit.
2. Fill the e-CRF fields with plausible values (the captions under each field give the accepted ranges, e.g. Systolic BP 70–250 mmHg).
3. Try one out-of-range value — confirm the form rejects it — then correct it.
4. Click **Save draft**, then **Save & submit for approval**.
5. Confirm your entry appears under **Entries** as submitted — and that no approve button is offered to you (approval belongs to the PI/Admin).
6. Note **Mark visit completed** at the bottom for when capture is done.

Expected result. Validation enforces plausible ranges; submitted entries queue for PI approval; the Coordinator sees no approve control. Completing the visit clears its overdue alert.

ACCEPTANCE CHECKLIST

- ☐ CRF fields render with range hints and CDISC variable names.
- ☐ Out-of-range input is rejected.
- ☐ Draft and submit-for-approval both work.
- ☐ No approval control is shown to the Coordinator.

Mark visit completed

Fig. 6. Visit detail e-CRF. Captured from the live system on 12 September 2026.

7 Data Entry (eCRF) — Doctor Note Intelligence (AI)

What this is for. Skip typing: photograph the doctor's handwritten note and the AI (Google Gemini vision) drafts the CRF with per-field confidence and source provenance. Your extraction becomes a draft for review — final approval as an official record stays with the PI/Admin.

STEPS

1. Click **Data Entry (eCRF)** in the sidebar.
2. Select a participant visit from the dropdown in **1 · Capture**.
3. Choose a photo of a handwritten note (JPG/PNG, max 10 MB) and click **Extract to CRF draft**.
4. In the review step, compare each extracted field with the photo: value, confidence badge and source text; correct anything that was misread.
5. Confirm low-confidence fields are flagged for manual confirmation, and that an unreadable photo is rejected with a "recapture needed" message.

Expected result. A legible note produces a CRF draft with high per-field confidences and provenance; the draft is queued for PI approval; bad photos are refused rather than guessed.

ACCEPTANCE CHECKLIST

- ☐ Visit selector and photo upload work.
- ☐ Extraction returns per-field values with confidence badges.
- ☐ Source text (provenance) is shown per field.
- ☐ Poor images are rejected with a recapture message.

Doctor Note Intelligence

Photograph a handwritten trial note — the platform drafts the visit CRF, validates it, and nothing becomes a record until you approve it.

1 · Capture

PARTICIPANT VISIT

CTRI-116740-P-0011 · Follow-up · 8/26/2026

NOTE PHOTO

Choose File No file chosen

Extract to CRF draft

Fig. 7. Doctor Note Intelligence — capture step. Captured from the live system on 12 September 2026.

AyuSphere UAT Guide — confidential demo environment

Page 15 of 22

8 Adverse Events — capture

What this is for. When a participant reports a safety issue, capture it here. The reporting/escalation clock starts at capture, and the Pharmacovigilance team takes over review, reporting and closure.

STEPS

1. Click **Adverse Events** in the sidebar.
2. Review the queue of open AE/SAEs sorted by reporting deadline (or the empty state if none are open).
3. Capture a test AE only if your test plan includes it (it creates a real record and notifies PV via the escalation clock).

Expected result. The queue lists open events with deadline countdowns; a captured event appears immediately and is visible to the PV role.

ACCEPTANCE CHECKLIST

- ☐ The AE page opens with a queue or clear empty state.
- ☐ Capture is available to the Coordinator.
- ☐ Captured events carry a reporting countdown.

Fig. 8. Adverse Events. Captured from the live system on 12 September 2026.

9 Messages (internal communication)

What this is for. Direct one-to-one messaging with every other user on the platform — coordinators, investigators, monitors, ethics, pharmacovigilance, admin and the regulator — so trial communication stays inside the audited system.

STEPS

1. Click **Messages** in the left sidebar.
2. The **People** list on the left shows every other platform user with their role badge.
3. Click a person (for example the Study Coordinator) to open the conversation panel.
4. Type a short test message (e.g. “UAT test — please ignore”) and send it.
5. Confirm your message appears in the thread with a timestamp.

Expected result. The people list shows the other demo users with role badges. A sent message appears immediately in the conversation and is delivered to the recipient (message events are also recorded in the audit trail).

ACCEPTANCE CHECKLIST

- ☐ Messages page opens from the sidebar.
- ☐ All other demo users are listed with correct role badges.
- ☐ Selecting a person opens a chat panel.
- ☐ A test message can be sent and appears with a timestamp.

Fig. 9. Messages — people list and conversation panel. Captured from the live system on 12 September 2026.

10 Alerts — acknowledge

What this is for. Operational alerts across your trials: overdue visits, protocol deviations, data-quality findings and enrolment lag. Acknowledging records that the site team has seen and owns the issue.

STEPS

1. Click **Alerts** in the sidebar.
2. Review the list: severity chip (danger / warning), category and timestamp on each alert.
3. Acknowledge one alert and confirm it leaves the open list.

Expected result. Alerts render with severity and category; acknowledgement clears them and is audited.

ACCEPTANCE CHECKLIST

- ☐ Alerts show severity, category and time.
- ☐ Acknowledge works and removes the alert.

Fig. 10. Alerts — long page cropped to fit; scroll in the live app to see the rest. Captured from the live system on 12 September 2026.

11 Documents

What this is for. Upload and consult trial documents — protocols, ethics approvals, consent forms — with preserved version history.

STEPS

1. Click **Documents** in the sidebar.
2. Upload a small test file: pick a trial, kind, title, choose the file (max 2 MB) and click **Upload**.
3. Confirm it appears in the **Library** with its metadata.

Expected result. The upload succeeds and the library lists the document against the right trial.

ACCEPTANCE CHECKLIST

- ☐ Upload form offers trial, kind, title and file.
- ☐ Upload succeeds within the size limit.
- ☐ The library shows the new document.

The screenshot displays the AyuSphere web application interface. On the left is a dark green sidebar with the AyuSphere logo and a list of navigation items: Dashboard, Messages, Clinical Trials, Participants, Visit Schedule, Data Entry (eCRF), Extractions, Adverse Events, Alerts, AI Assistant, and Documents (which is highlighted). At the bottom of the sidebar is the AYUSH logo with the tagline 'Traditional Wisdom Modern Evidence'. The main content area has a light green header with a search bar and a user profile for Ravi Kumar, Study Coordinator. Below the header, the 'Documents' section is titled, with a subtitle 'Protocols, ethics approvals, consent forms — version history preserved.' The 'Upload' form contains four fields: 'TRIAL' (dropdown menu with 'CTRI-116584' selected), 'KIND' (dropdown menu with 'Protocol' selected), 'TITLE' (text input with 'Protocol v2'), and 'FILE (MAX 2 MB)' (button labeled 'Choose File No file chosen'). A green 'Upload' button is to the right of these fields. Below the upload form is a 'Library (0)' section with the text 'No documents uploaded yet.'

12 Signing out

What this is for. Ends your session so nobody else can act under your account — important on shared computers at trial sites.

STEPS

1. Click your **name / avatar** in the top-right corner of any page.
2. Choose **Sign out** from the menu.

Expected result. You are returned to the login page. Pressing the browser Back button does not re-open protected pages with your data.

ACCEPTANCE CHECKLIST

- ☐ The sign-out option is available from the top-right user menu.
- ☐ After signing out you land on the login page.
- ☐ Navigating directly to a protected page (e.g. /dashboard) redirects you to log in again.

UAT sign-off

Record the outcome of each test case. A test passes when every item of its acceptance checklist is satisfied.

ID	Step / feature	Expected	Pass / Fail	Remarks
TC-01	Logging in	Login succeeds; dashboard opens with correct name and role		
TC-02	Navigation overview & dashboard	Dashboard renders; sidebar limited to Coordinator items		
TC-03	Clinical Trials	Trial list and detail render with statuses and KPIs		
TC-04	Participants — screening, consent, enrolment	Register shows de-identified codes with stage chips; add flow auto-generates codes		
TC-05	Visit Schedule	Visits grouped Overdue / Due / Upcoming; rows open detail		
TC-06	Visit detail — entering CRF data	CRF entry saves and submits for PI approval; no approve button for Coordinator		
TC-07	Data Entry (eCRF) — Doctor Note Intelligence (AI)	AI drafts CRF from a photo with confidences; approval remains with PI		
TC-08	Adverse Events — capture	AE capture available; queue sorted by reporting deadline		
TC-09	Messages (internal communication)	People list shows all users; a test message sends and appears in the thread		
TC-10	Alerts — acknowledge	Alerts listed with severity; acknowledge clears an alert		
TC-11	Documents	Document uploads and appears in the library		
TC-12	Signing out	Session ends; protected pages no longer accessible
