

AyuSphere · Judge Demo Script

The 8-minute storyline — mapped to the four evaluation axes

AyuSphere — AI-assisted Clinical Research Intelligence Platform for Ayurveda (SIH26046). All participant data is synthetic/de-identified; trials are real public CTRI registry records.

Problem statement **SIH26046** · evaluated on: data accuracy & integrity · timeliness of safety & regulatory reporting · interoperability conformance · access-control & audit completeness

Live demo: <https://ayusphere-three.vercel.app> · every role signs in with password

[Demo@1234](#)

pi@ · coordinator@ · monitor@ · ethics@ · pv@ · admin@ · regulator@ — all [aiaa.demo](#)

Generated 14 September 2026. Each step names the login, the exact clicks, the line to say, and the axis it scores.

0:00 —

PI

Axis 4 · access control

1. Sign in as **pi@aiaa.demo** — the dashboard is role-tailored: signing queue, open data queries, due visits
2. Click the leaf orb — **Sphera** greets by name and role (it remembers past conversations)

Say: Seven enforced roles, each with its own dashboard. Even the in-app guide only knows *THIS* role's screens.

1:00 —

PI

Axis 1 · data integrity

1. **Visit Schedule** → open a due visit → fill the e-CRF (ranges enforced) → **Save & submit for approval**
2. Enter your password and click **Sign & approve** — a GCP electronic signature: password re-verified, SHA-256 hash of the record stored

Say: Approval is not a click — it is a signature. The hash lands in the immutable audit trail.

PI — live screen

2:30 — PI Axis 2 · safety timeliness

- Adverse Events** → **Capture** tab → pick the participant, type 'Nausea' (MedDRA picker auto-codes it), suspected formulation 'Ashwagandha churna' (WHODrug picker), seriousness **SAE** → **Capture**
- The **Open AEs** tab shows the new SAE with its escalation clock already counting down

Say: Coded to MedDRA and WHODrug demo dictionaries; the NDCT-style deadline clock starts at capture — and the rules are admin-configurable, not hard-coded.

PV

Axis 2 · safety timeliness

1. Switch to **pv@aiia.demo** — the safety dashboard sorts by deadline proximity
2. **Start PV review** → **Sign & mark reported** (another e-signature) → **Generate regulatory report** — the printable CIOMS-style summary with the full escalation timeline and deadline compliance
3. **Safety Signals** tab → term×trial disproportionality flags → **Full DSMB summary** (printable board pack); the **NPvCC ADRs** tab takes spontaneous reports

Say: *AIIA hosts the National Pharmacovigilance Coordination Centre — this is that role, end to end, with artifacts a regulator can hold.*

Axis 3 · interoperability

1. **Reports & Exports** → download the **FHIR R4 Bundle**, **SDTM DM/AE**, **ADaM ADSL** and **Define-XML** (real variable-level metadata)
2. Show the live API: GET /api/fhir/Bundle/[trialId] returns application/fhir+json; inbound Observation bundles land as DRAFT CRFs — nothing imported auto-commits

Say: CDISC and FHIR are not slideware here — every artifact opens, and the API is live and audited.
