Generated 14 September 2026 from the application's living knowledge base — click paths in this guide are the exact labels in the product and are drift-guard tested against the navigation and permission matrix.

1 · Your workspace

The dark green sidebar on the left lists every screen your role can access, grouped into sections (Overview, Study Conduct, Data Capture, Safety & Quality, Intelligence, System) when the list is long. On phones, the sidebar becomes a menu button (≡) in the top bar that opens the same navigation as a drawer. The top bar also has a quick search (type 2+ letters to jump to a screen, a trial by protocol code, or a participant by subject code — Enter opens the first match), a bell icon showing open alerts (click it to open **Alerts** if your role has it), and your profile chip.

Dashboard

2 · What you can and cannot do

You can

- schedule and complete monitoring visits (the due-date cadence is admin-configurable)
- raise and close data queries on CRF entries — an open query blocks approval
- view monitoring analytics and data-quality findings
- acknowledge alerts

You cannot

- enter or approve CRFs, answer data queries, enrol participants, or edit trials — those belong to the PI/Coordinator
- use the AI Copilot or exports
- delete or edit audit-trail entries — the audit log is append-only for everyone, including admins

- message any user

3 · Core workflows (exact click paths)

Log a monitoring visit

1. Go to **Monitoring** — the 'Monitoring visits' card lists every activated trial-site with its due date
2. Pick the trial site and a date, click **Schedule monitoring visit**; after the visit, fill the summary (and findings, one per line) and click **Complete visit** — the site's next due date advances by the configured cadence and any overdue alert auto-resolves

Raise and close data queries

1. On **Monitoring**, the 'Data queries' card shows open/answered/closed counts and median cycle time
2. Pick the CRF entry, type the question and click **Raise query** — the entry CANNOT be approved until the data-entry team answers it
3. Once answered, click **Close query** (optionally with a resolution note)

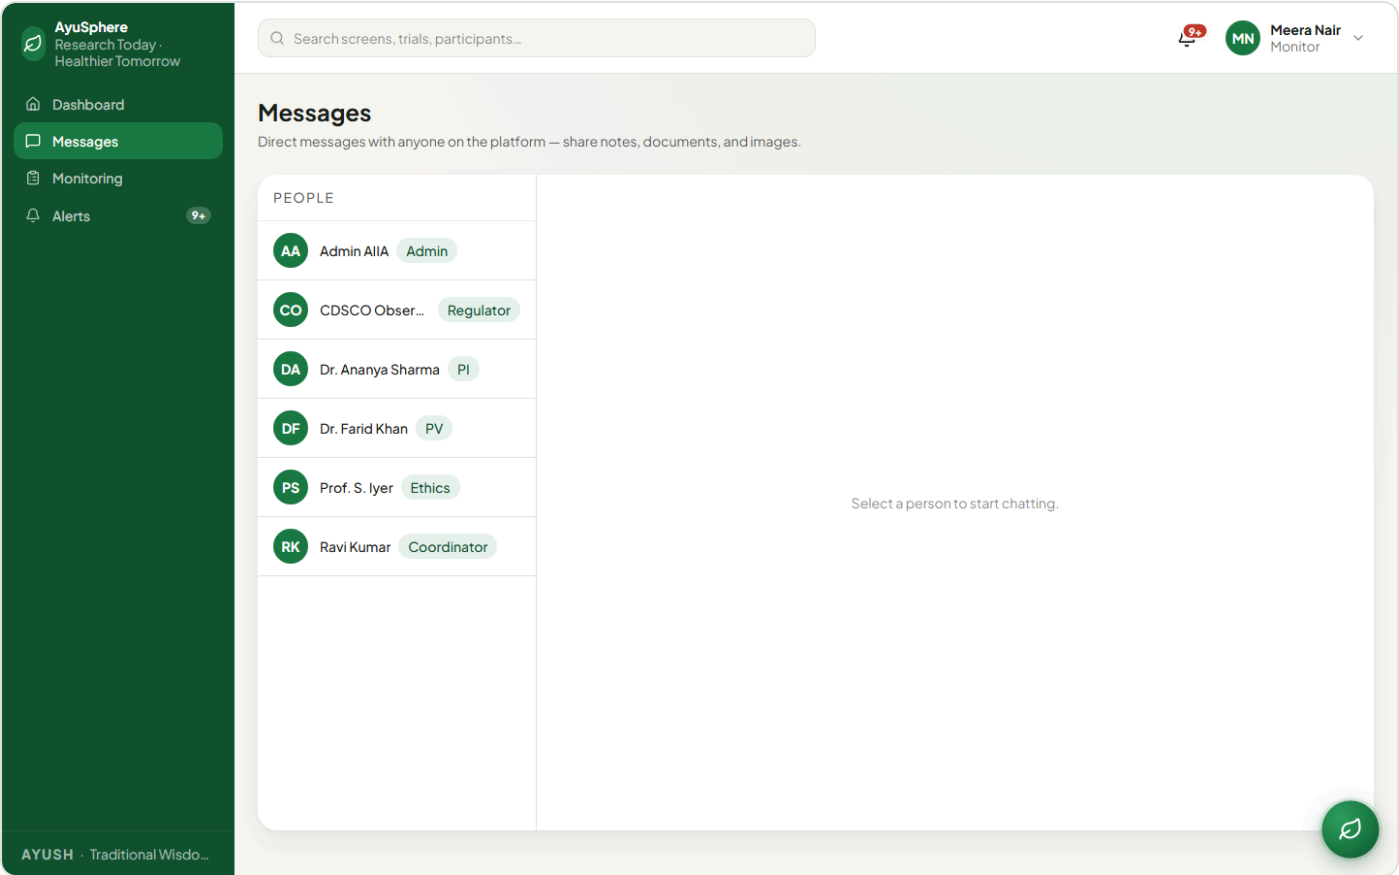

Review site performance and data quality

1. **Monitoring** also shows, per active trial: per-site recruitment bars, open data-quality findings (duplicates, impossible values, missing assessments) and deviation alerts

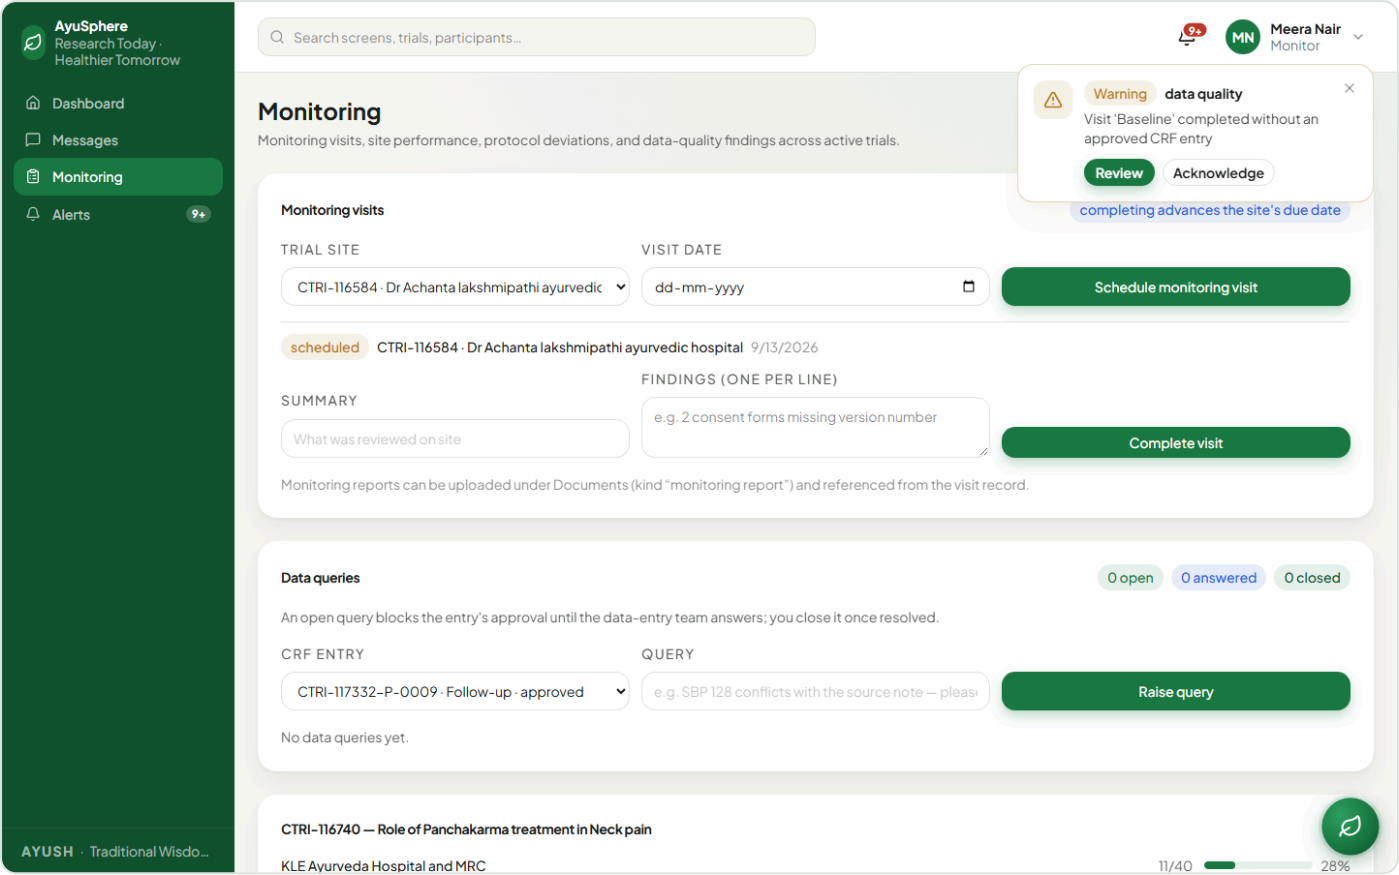

Work the alert queue

1. Go to **Alerts**, review overdue-visit / deviation / data-quality / monitoring-overdue items and click **Acknowledge** on the ones you own

5 · New in this build

- **Monitoring visits** — schedule and complete site visits; the due date advances by the configured cadence and overdue sites raise alerts
- **Data queries** — raise a query on any CRF entry (blocks its approval), close it when resolved; cycle-time stats on the page
- **Tailored dashboard** — site due dates and open queries lead the page
- **Sphera guide with memory**, quick-search, mobile drawer, live badges

How this role scores in evaluation: Axis 1 (data accuracy & integrity): data queries + quality findings.
Axis 4: monitoring oversight trail.

AyuSphere · SIH26046 · Monitor UAT guide · generated 14 September 2026 · all participant data synthetic (DPDP), trials are public CTRI registry records.
