

# AyuSphere · UAT Guide

## Pharmacovigilance

AyuSphere — AI-assisted Clinical Research Intelligence Platform for Ayurveda (SIH26046). All participant data is synthetic/de-identified; trials are real public CTRI registry records.

Problem statement **SIH26046** · Ministry of Ayush · All India Institute of Ayurveda

**Live demo:** <https://ayusphere-three.vercel.app>

**Sign in as:** [pv@aiaa.demo](#) · password [Demo@1234](#)

Generated 14 September 2026 from the application's living knowledge base — click paths in this guide are the exact labels in the product and are drift-guard tested against the navigation and permission matrix.

## 1 · Your workspace

The dark green sidebar on the left lists every screen your role can access, grouped into sections (Overview, Study Conduct, Data Capture, Safety & Quality, Intelligence, System) when the list is long. On phones, the sidebar becomes a menu button (☰) in the top bar that opens the same navigation as a drawer. The top bar also has a quick search (type 2+ letters to jump to a screen, a trial by protocol code, or a participant by subject code — Enter opens the first match), a bell icon showing open alerts (click it to open **Alerts** if your role has it), and your profile chip.

Dashboard · Messages · Adverse Events · Alerts · AI Assistant · Reports & Exports

The screenshot displays the AyuSphere dashboard for Dr. Farid Khan, a Pharmacovigilance user. The interface features a dark green sidebar on the left with navigation links: Dashboard (selected), Messages, Adverse Events, Alerts (9+), AI Assistant, and Reports & Exports. The top bar includes a search bar, a notification bell, and the user's profile (Dr. Farid Khan). The main content area is titled 'Welcome, Dr. Farid Khan' and provides an overview of clinical trial metrics: Active Trials (15, +25 this week), Total Participants (66, +26 this week), Sites (10 across), Upcoming visits (38, 3 overdue), and Adverse Events (0 under review). A 'Safety portfolio' section indicates no open adverse events. Below this, 'Safety signals' and 'DSMB summary' are shown with no recorded events. A 'Recent Activities' list shows messages sent and an SDTM AE exported. On the right, a 'Warning data quality' alert states that a 'Baseline' visit was completed without an approved CRF entry, with 'Review' and 'Acknowledge' buttons. A 'Data' upload section prompts the user to drag and drop lab reports or prescriptions, supporting JPG and PNG files up to 10 MB. The footer of the sidebar mentions 'AYUSH - Traditional Wisdom'.

Dashboard

## 2 · What you can and cannot do

### You can

- capture adverse events and run the review walk (under review → reported → closed)
- acknowledge alerts, run exports, use the AI Copilot

### You cannot

- enter or approve CRFs, enrol participants, or edit trials
- manage users or settings — Admin only
- delete or edit audit-trail entries — the audit log is append-only for everyone, including admins

## 3 · Core workflows (exact click paths)

---

### Track AE/SAE reporting deadlines

1. **Adverse Events** → **Open AEs** tab lists every open AE/SAE sorted by reporting deadline, each with a live countdown clock (amber < 24h, red < 6h, pulsing when breached)
2. On an open event: **Start PV review**, then **Sign & mark reported** (re-enter your password — it's an e-signature), or **Generate regulatory report** for the printable CIOMS-style summary
3. The **Capture** tab records a new event with MedDRA/WHODrug pickers; **Safety Signals** shows term×trial clusters + the DSMB summary; **NPvCC ADRs** receives spontaneous reports (receive → assess → forward)
4. Deadline alerts (approaching/breached) also appear under **Alerts** — click **Acknowledge** to own one

### Export safety data

1. Go to **Reports & Exports**, pick the trial and download **SDTM AE (CSV)** or the **FHIR R4 Bundle** — exports are audit-logged

### Ask the AI Copilot about safety

1. **AI Assistant** → ask e.g. "Any open SAEs near their deadline?" — answers cite the actual AE records

## 5 · New in this build

---

- **Signed safety reporting** — 'Sign & mark reported' re-verifies your password (e-signature); the audit trail keeps the hash
- **CIOMS-style SAE report** — one click generates the printable regulatory report with the escalation timeline and deadline compliance
- **Safety Signals + DSMB summary** — term×trial disproportionality flags and a printable board pack
- **NPvCC ADR intake** — spontaneous ASU&H reports: receive → assess → forward, feeding the signal view
- **AE tabs** — Open AEs / Capture (MedDRA & WHODrug pickers) / Safety Signals / NPvCC ADRs
- **Configurable deadline rules** — the AE/SAE clock now follows the admin-set rule table
- **Tailored dashboard** — escalation clocks and signals lead the page; **Sphera memory**, quick-search, mobile drawer

**How this role scores in evaluation:** Axis 2 (timeliness of safety reporting): escalation clocks, signed reports, DSMB signals — the whole axis lives in your screens.
