

AyuSphere · UAT Guide

Principal Investigator

AyuSphere — AI-assisted Clinical Research Intelligence Platform for Ayurveda (SIH26046). All participant data is synthetic/de-identified; trials are real public CTRI registry records.

Problem statement **SIH26046** · Ministry of Ayush · All India Institute of Ayurveda

Live demo: <https://ayusphere-three.vercel.app>

Sign in as: [pi@aiaa.demo](#) · password [Demo@1234](#)

Generated 14 September 2026 from the application's living knowledge base — click paths in this guide are the exact labels in the product and are drift-guard tested against the navigation and permission matrix.

1 • Your workspace

The dark green sidebar on the left lists every screen your role can access, grouped into sections (Overview, Study Conduct, Data Capture, Safety & Quality, Intelligence, System) when the list is long. On phones, the sidebar becomes a menu button (☰) in the top bar that opens the same navigation as a drawer. The top bar also has a quick search (type 2+ letters to jump to a screen, a trial by protocol code, or a participant by subject code — Enter opens the first match), a bell icon showing open alerts (click it to open **Alerts** if your role has it), and your profile chip.

Dashboard

2 • What you can and cannot do

You can

- create/edit trials and run lifecycle steps (except the ethics decision itself)
- manage sites, participants, visits and documents
- enter CRFs and APPROVE CRF entries and note extractions
- capture adverse events and use the AI Copilot and exports

You cannot

- approve or return an ethics review — only the Ethics Committee (or Admin) decides that
- run the pharmacovigilance review walk (mark AEs reported/closed) — that's the Pharmacovigilance role (or Admin)
- manage user accounts or the AI model settings — Admin only
- delete or edit audit-trail entries — the audit log is append-only for everyone, including admins

3 · Core workflows (exact click paths)

Create a new trial and take it through the lifecycle

1. Go to **Clinical Trials**, click **New Trial**
2. Fill protocol code, title, intervention, target enrolment and at least one visit-plan row, then click **Create trial**
3. Upload the protocol first: **Documents** → pick the trial → Kind **Protocol** → choose file → **Upload** (ethics submission is gated on this)
4. On the trial page click **Submit for ethics review** — the Ethics Committee approves it on their side
5. After approval, enter the CTRI number and click **Record CTRI registration**, attach & activate a site under **Site Management**, then click **Activate trial**

Enrol a participant

1. Go to **Participants**, choose the active trial · site, click **Add (code auto-generated)** — the subject code is created for you, no personal data is entered
2. On the new row click **Pass screening**, then **Record consent** — consent binds the trial's current consent-form version (a trial with no consent form on file refuses consent)
3. Click **Enrol & randomize** — the arm is assigned by permuted-block randomization (no manual choice) and the protocol visit schedule is generated automatically

Amend an active protocol (IEC oversight)

1. Open the trial page — the **Protocol amendments** card shows the current protocol version
2. Describe the change in **Amendment summary** and click **Submit to Ethics**; the Ethics Committee approves or returns it with a comment
3. Once approved, the protocol change (visit plan / arms) can be applied — it consumes the amendment and bumps the protocol version

Answer a monitor's data query

1. Open the visit under **Visit Schedule** — an entry with an open query shows the monitor's question and "approval is blocked until this query is answered"

2. Type the answer and click **Answer**; approval unlocks once answered, and the monitor closes the query on their side

Capture a visit CRF manually

1. Go to **Visit Schedule**, click the participant's visit
2. Fill the e-CRF fields (plausible ranges are shown under each field) and click **Save & submit for approval**
3. On the submitted entry, enter your password and click **Sign & approve** — approval is an electronic signature (your password is re-verified and a SHA-256 hash of the record is stored); then **Mark visit completed**

Scan a doctor note into the CRF (AI OCR)

1. Go to **Data Entry (eCRF)**, choose the participant visit, click **Note photo** and pick the photo (large phone photos are auto-compressed)
2. Click **Extract to CRF draft** — the AI (Gemini) reads the note and shows every field with a confidence badge next to the original image
3. Fields marked **confirm** (low confidence or contradicting an earlier approved record) must be clicked/edited before approval unlocks
4. Click **Approve as record** — an official CRF entry is created with full provenance; see it under the visit's Entries and in **Extractions**

Watch safety deadlines

1. **Adverse Events** → the **Open AEs** tab lists open AE/SAE sorted by reporting deadline with a live countdown clock (amber under 24h, red under 6h)
2. To record a new event, switch to the **Capture** tab and use the MedDRA/WHODrug pickers; the **Safety Signals** tab shows term×trial clusters and the DSMB summary link
3. Open **Alerts** to acknowledge deadline, enrolment-lag, overdue-visit and deviation alerts

Ask the clinical AI Copilot

1. Go to **AI Assistant**, ask e.g. "Which sites are behind target?" — every answer cites the underlying records; with no supporting records it declines rather than guessing

Export submission-ready data

1. Go to **Reports & Exports**, pick a trial, download **FHIR R4 Bundle**, **SDTM DM (CSV)**, **SDTM AE (CSV)**, **ADaM ADSL (CSV)** or **Define-XML** (variable-level metadata) — every export is recorded in the audit trail
2. Systems can also pull live FHIR from the API (audited), and inbound Observation bundles land as DRAFT CRF entries — nothing imported auto-commits

Quick search — jump to any screen, trial or participant

5 · New in this build

- **Electronic signatures** — approving a CRF, an extraction, or a correction re-verifies your password and stores a SHA-256 hash of the record (GCP e-sign)
- **Enrol & randomize** — arms are assigned by permuted-block randomization; manual arm choice is gone
- **Protocol amendments** — changing a running trial's visit plan/arms now requires an IEC-approved amendment (trial page card)
- **Consent register** — consent binds the consent-form version signed; a new form version flags re-consent per participant
- **Data queries** — a monitor's open query blocks entry approval until you answer it on the visit page
- **Adverse Events tabs** — Open AEs / Capture (MedDRA & WHODrug pickers) / Safety Signals / and the DSMB summary
- **Exports grew** — real Define-XML (variable-level metadata), ADaM ADSL, and a live audited FHIR API
- **Tailored dashboard** — your signing queue, open queries and visits lead the page
- **Sphera guide with memory** — the leaf orb remembers your conversation across refreshes and devices
- Grouped sidebar sections, working quick-search, mobile navigation drawer, live unread badges

How this role scores in evaluation: Axis 1 (data accuracy & integrity): template-validated CRFs, signed approvals, versioned corrections. Axis 3 (interoperability): the exports you run.
